

METHOD AND SYSTEM FOR LOCALIZING WEB PAGES

ABSTRACT OF THE DISCLOSURE

5 A computer implemented method for localizing Web pages is disclosed. The method includes reading a computer file containing HTML tags and scripts and identifying character strings located between the HTML tags and within the scripts. A modified version of the computer file is generated by replacing the identified character strings with variables. An include file containing the variables and associated character strings is also generated. The method further includes adding a reference to the include file in the modified version of the computer file.
